

MAKE A WIND VANE

Step 1) Locate an index card, a penny, a short piece of a drinking straw, a kebob skewer, double stick tape, a marker, and a pencil.

Step 2) Fold the index card in half the long way.

Step 3) Cut the folded card diagonally from the folded corner to the open corner. Keep the large piece with the fold and discard the two smaller pieces.

Step 4) Using double stick tape, tape the penny as far toward the folded point as you can while still being able to fold the card over and cover the penny completely.

Step 5) Find the center of gravity of the pointer by rolling the pointer over the pencil until the pointed end just drops to the table. Mark the position of the pencil.

Step 6) Tape the short piece of drinking straw to the inside of the pointer at the mark, even with and perpendicular to the fold.

Step 7) Use a piece of double stick tape to seal the open edge of the pointer.

Step 8) Place the straw in the pointer over the kebob skewer.

The weather vane is completed. If you hold it up in a breeze, the vane will point into the wind.
